The Survey of Income and Program Participation (SIPP)

Longitudinal survey collecting data and measuring change for topics such as:

- Economic Well-being
- Family Dynamics
- Education
- Assets
- Health Insurance
- Childcare
- Food Security

U.S. Department of Commerce Economics and Statistics Administration U.S. CENSUS BUREAU census.gov Assets Poverty Deading Formation of the second seco

# **SIPP Survey Design**

- Sample is multi-stage, stratified sample of the noninstitutionalized, civilian U.S.
  population
- Sample size 53,000 households
- 4-year panel
- Conducted in waves, each 1 year long
- Four-month interview period

### Interviewers

- Used 1,345 field representatives (FRs)
  - ~300 new hires
  - Remainder experienced interviewers
- Sample size was ~53,000 households
- Approximately 40 cases per FR
- Interviews all done in-person
- Yielded just under 30,000 completed cases

# **Interviewer Training**

- Two-day generic Census training
  - New hires only
  - Covers cross-survey skills
- Four-day classroom training
  - All SIPP FRs
  - Specific to SIPP
- Pre- and post-classroom self-study modules
- Ends with certification test

- 72 questions, divided into 8 sections:
- 1. Field Procedures (11)
- 2. Event History Calendar (12)
- 3. Programs (6)
- 4. Movers (15)
- 5. Content (10)
- 6. Noninterviews (6)
- 7. Medicare vs. Medicaid (7)
- 8. Blaise/Instrument Navigation (5)

# **Audit Trails**

- Audit trail files are a record of all of the keystrokes entered by a field representative (FR) during an interview
- Audit trail files can be used to create paradata on such things as:
  - Section timers,
  - Don't know/refused counts,
  - Help screen calls,
  - Checks encountered,
  - Item-level notes left, and
  - FR navigation throughout the instrument

# **Contact History Instrument**

- Keeps a history of every contact attempt for every case
- Collects information about the kind of response received (if contact is made)
  - Reluctant respondent, etc.
- Also collects FR's observation about housing unit/neighborhood conditions

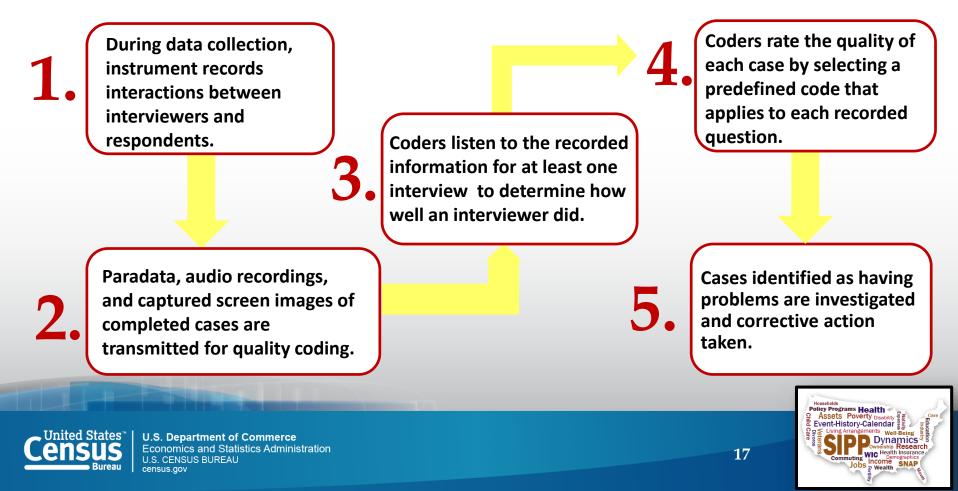

- Computer-Assisted Recorded Interviewing
- FRs must obtain consent from each respondent to record the interview
- Records interactions between Field Representatives (FRs) and respondents
- The goal of CARI is to ensure the accuracy and quality of data collected
  - Improve the FR's performance
  - Identify difficult or problematic questions

U.S. Department of Commerce Economics and Statistics Administration U.S. CENSUS BUREAU census.gov

The Quality Assurance Component in the CARI system can be used to evaluate the quality of completed cases.

- Helps ensure that data collection is errorfree and that FRs act professionally
- Listen to recorded cases and code them for:
  - Authenticity
  - Question administration
  - Behavioral conduct

We consider data inauthentic when interviewers do not collect them directly from respondent

- FRs may feel they already know the answer (and do not confirm it)
- FRs may skip a question
- Occasionally, FRs may fabricate a response entirely

Errors in question administration arise when questions are presented differently

- FRs do not read the questions as worded
- Speed/volume of interviewer's voice does not match respondents'
- FRs do not probe or lead the respondent

- Behavioral problems arise when the interviewer's conduct is inappropriate for a Census Bureau employee
  - Off-topic personal discussions
  - Overly task-oriented
  - Unfriendly or hostile
- SIPP is dependent on respondents having a good relationship with FRs

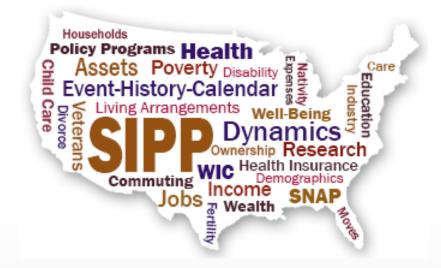

## Conclusion

- SIPP (and the Census Bureau more generally) has access to more paradata than we have ever had in the past
- Effective use of this paradata for FR monitoring and performance can help us improve data quality

U.S. Department of Commerce Economics and Statistics Administration U.S. CENSUS BUREAU census gov
